

NEWS INTELLIGENCE AGENT

Catch-Up

Your world, caught up — collected, ranked, and summarized by AI.

BUILT WITH

THE PROBLEM

Too much news. Too little time.

- News is scattered across feeds, sites, APIs, and video
- No fast catch-up in both Arabic and English
- Manual monitoring that just doesn't scale

THE SOLUTION

One agent that catches you up.

- Collects from everywhere
- Ranks what actually matters
- Summarizes in English + Arabic
- Delivers a digest — scheduled or on-demand

HOW IT WORKS

A multi-agent pipeline on Google ADK

Everything runs through one ADK agent tree — collectors fan out in parallel, then one Gemini pipeline produces a trustworthy digest.

ORCHESTRATION

One ADK agent tree

13

agents · one tree

- 1 Sequential orchestrator
- 1 Parallel fan-out
- 5 Source collectors
- 6 Pipeline stages

THE AGENTS

What each agent does

PIPELINE STAGES

PipelineInit — create & ID the run

CollectSources — 5 collectors, in parallel

NormalizeDedup — merge & de-duplicate

Processing — enrich with Gemini

GuardrailCritic — fact-check & self-correct

DigestEditor — write the EN / AR story

Render — Excel · HTML · Markdown

GEMINI SUB-AGENTS (LLM)

news_processor — categorize · score · summarize

faithfulness_critic — verify vs the source

digest_editor — compose the narrative

search_collector — Google Search grounding

youtube_summarizer — summarize transcripts

+ news_reprocessor (self-correction) · enrichment_judge (offline eval)

ARCHITECTURE

Four decisions behind the build

ADK-native

The agent tree IS the orchestration — no glue code.

Free → Cloud by config

Same code runs local or on Google Cloud, not a rewrite.

Swappable storage

SQLite ↔ Firestore behind a clean storage port; AI Studio ↔ Vertex by config.

Secure by default

Loopback-guarded settings, fail-closed auth & guardrails, one SSRF chokepoint.

FEATURE 01

Collect from everywhere

One safe pipeline pulls from five source types — SSRF-guarded and rate-limited.

RSS

Web scrape

News APIs

YouTube

Search grounding

WHY

No single source has the whole picture.

FEATURE 02

Rank & summarize with Gemini

- Categorize into AI/Tech, Business, World, and Gulf/MENA
- Score importance — see what matters first
- Summarize in English + Arabic
- Extract the people, orgs, and places

WHY

Triage-first — the signal, in your language.

An agent you can trust

- An LLM-as-judge critic fact-checks top items against their source
- Unfaithful summaries are flagged — and never shown
- The judge and the critic share one faithfulness rubric

WHY

No hallucinations. No made-up news.

FEATURE 04

Delivered the way you work

- Excel · HTML dashboard · Markdown digests
- A Next.js console to browse, search, and configure
- A one-click macOS desktop app

WHY

Meet every user on the surface they already use.

PROCESS

How I directed the build

I set the architecture & standards up front, then looped every feature through this — reviewed and tested before it merged.

Standards up front

Architecture, security & the 'Signal' design system — fixed in CLAUDE.md before any code.

Independent review gates

Every plan and task passed an external Codex review before merge.

Persistent memory

A living BUILD-LOG and memory kept the agent on-thread across sessions.

SUMMARY

Free today. Cloud-ready tomorrow.

- Runs free on your laptop
- Scales to Cloud Run + Vertex AI + Firestore — by config
- Built on Google ADK + Gemini
